Software Engineer

Result-driven software developer with 4 years of experience enhancing and maintaining enterprise-scale web applications built in **ASP.NET Framework MVC** and **ASP.NET Core**. **Recent co-op experience** using **mainstream full-stack technologies**, including **Next.js, Spring Boot, and MongoDB**. Proven ability to collaborate with cross-functional teams and internal users to clarify **system requirements** and transform the requirements into real products or features throughout the **software development lifecycle**.

Skills

Front-End: HTML, CSS, JavaScript, TypeScript, React, Angular

Back-End: C#, .NET, Java, Python, ASP.NET Core, ASP.NET Framework MVC, Entity Framework Core, Spring Boot, Django, OpenAPI (Swagger), Object-Relational Mapping (ORM), JSON Web Token (JWT), RESTful API Design, API Documentation, Object-Oriented Programming, Aspect-oriented programming, Layered Design, Domain-Driven Design, RabbitMQ, API Gateways

Database: SQL, MS SQL, PostgreSQL, MongoDB, Redis, Relational Database, Non-SQL Database

Platforms: Heroku, Netlify, Railway, GitHub, ChatGPT, Claude AI, Figma

Tools: Git, JetBrains' IDEs, Visual Studio, Visual Studio Code, GitHub Copilot, Docker, GitHub Actions

Others: Analytic Skills, Communication, Problem-Solving skills, Teamwork, Automatic Deployment, Agile Methodology, CI/CD

Experience

Student Software Engineer Sep 2024 – Dec 2024

Pan-X Corp. dba Dan's FarmaRoot, Toronto

The largest ginseng grower in North America

- Delivering a **fully functional backend application** for providing API services using **Spring Boot** and **MongoDB**, and a **responsive and user-friendly website** with cutting-edge technologies, including **Tailwind CSS** and **Next.js**, reducing the industrial partner's marketing efforts to reach the same goal and supporting better SEO strategies
- Participated in the **requirement analysis**, including understanding user roles and writing user stories
- Collaborated on **iteration planning**, confirming the requirements of each user story, transferring user stories into tasks, and conducting task estimation
- Worked in a **cross-functional team** to transform the documentation into a functional prototype, bringing a **shorter development cycle and quicker delivery**
- Used **GitHub** for code sharing, merging, and team collaboration, allowing **smoother and faster application deployment**
- Communicated and collaborated with the client closely, resulting in **on-time delivery and better project flow**
- Conducted **acceptance test** on key user stories
- Used **Figma** for UI/UX design to enhance the prototype presentation
- Used **JetBrains IDEs** to facilitate effective debugging and efficient coding

Full-Stack Software Engineer Sep 2019 – Jun 2023

YF Life Insurance International Limited, Hong Kong

A large insurance company with 500+ employees, equipped with in-house built systems for advisor enquiry

- Reduced **30%** of report printing by enhancing the legacy system built in **ASP.NET MVC** to support reports' digitalization and establishing **stored procedures** for the constant migration of reports' data between **MS SQL Server** and **Oracle Database**
- Developed **three Angular-based webpages** and updated the **ASP.NET Core back-end system**, supporting the company to adapt to the dramatically changing market
- Worked in **cross-functional teams**, including business analysts and product owners, to translate needs into scalable technical solutions, bringing in **more innovative and user-friendly products**
- Used **TortoiseSVN** for version control to streamline teamwork
- Used **Visual Studio** for development to facilitate effective debugging and efficient coding

Project Experience

Online Shop ([Click to visit GitHub Repo](#)) June 2025 – Present

- Implemented Vertical Slice Architecture with Feature folders, CQRS with MediatR library, Domain-Driven Design, Clean Architecture, and Cache-aside Design with Redis
- Built high-performance inter-service gRPC communication, allowing quick interaction between services
- Using RabbitMQ to facilitate the implementation of event-driven design
- Setting up an API gateway with Yarp to apply the Gateway Routing Pattern
- Encapsulated logging, global exception handling, and health check features into a .NET library to keep the core functions clean and effectively solve cross-cutting concerns.
- Containerized the application, allowing deployment on multiple platforms without any change to the application
- **Environment:** ASP.NET Core, Domain-Driven Design (DDD), Microservices, PostgreSQL, MS SQL, Redis, RabbitMQ, API Gateways, Entity Framework (EF) Core, Object-Relational Mapping (ORM), Docker, CQRS, ASP.NET Razor

Restaurant Food Planning System in Rust ([Click to visit GitHub Repo](#)) May 2025 – May 2025

- Implemented the same RESTful API design with Axum, SeaORM, and Rust
- Containerized the application, allowing deployment on multiple platforms without any change to the application
- Leveraged the cloud platforms, GitHub and Railway, to facilitate automatic deployment
- **Environment:** Rust, Axum, Utoipa, SeaORM, Docker, Automatic Deployment, GitHub, Railway, RESTful API

Portfolio Website ([Click to visit GitHub Repo](#)) Jan 2025 – Apr 2025

- Produced a website with Angular, providing all project information
- Leveraged cloud platforms, GitHub and Netlify, to facilitate automatic deployment
- **Environment:** Angular, Netlify, GitHub

Blog System ([Click to visit GitHub Repo](#)) Sep 2024 – Dec 2024

- Conducted acceptance test on key user stories
- Participated in the requirement analysis, including understanding user roles and writing user stories
- Collaborated on iteration planning, confirming the requirements of each user story, transferring user stories into tasks, and conducting task estimation
- Programmed modules and APIs' logic and contributed to deployment to Heroku
- Played a role in interface mockups creation with Figma and worked on front-end development with React based on the mockups
- Delivered and demonstrated new features to the industrial partner each week
- **Environment:** Java, Spring Boot, RESTful API, MongoDB, JSON, JSON Web Token (JWT), React, Next.js, Heroku, GitHub, Figma, Agile Methodologies

Sentiment Analysis Web Application ([Click to visit GitHub Repo](#)) Sep 2024 – Dec 2024

- Produced a website, which provided accurate sentiment analysis, with libraries from NLTK and Django
- Shortened the development time from three days to one day by using ChatGPT to facilitate the project configuration and coding
- Leveraged cloud platforms, GitHub and Heroku, to facilitate automatic deployment
- **Environment:** Python, Django, HTML, CSS, Automatic Deployment, GitHub, Heroku

Restaurant Food Planning System ([Click to visit GitHub Repo](#)) Jun 2024 – Aug 2024

- Implemented the back-end application by following the layered design
- Built a responsive and user-friendly website based on the design of another teammate and using Next.js
- Transformed the defined classes to related tables, which were in third normal form, with Entity Framework Core
- Developed role-based authentication and authorization with .NET Core's built-in features
- Collaborated with another teammate and contributed to project success by offering input and feedback in UI/UX design
- Set up workflow in GitHub Actions to facilitate CI/CD

- Utilized Cursor, an AI-powered IDE, to generate and refine test cases for React components, ensuring robust functionality and reliable performance
- **Environment:** C#, ASP.NET Core, Entity Framework Core, OpenAPI (Swagger), HTML, CSS, React, Next.js, TypeScript, JSON, Automatic Deployment, Heroku, JSON Web Token (JWT), RESTful API, CI/CD

Education

Software Engineering Technician Diploma Sep 2023 – Dec 2024

Centennial College, Toronto

GPA: 4.344/4.5

Bachelor of Computing in Internet Technology Sep 2017 – Aug 2019

Hong Kong Metropolitan University, Hong Kong

GPA: 3.57/4.0
